# Business Intelligence with Alerting and Monitoring for RightFax®

## Built by RightFax® Experts

The FaxStat™ Business Intelligence (BI) suite from Ingenium Software is a unique platform that combines real-time analytics gathering with monitoring and alerting capabilities. It provides a single location where you can simply “click and go” to gather critical business data regarding the status of your RightFax® environment. If RightFax® is a business critical application within your organization, FaxStat™ can help you provide the most comprehensive monitoring, alerting and reporting on your fax communications in an easy to use web interface that can be shared among system administrators and network operations centers. FaxStat™ can monitor 50 different metrics including system health, fax volume, usage and more.

FaxStat™ BI can help you:

- Monitor and track server status, queue depth and channel usage level. Monitor SLAs and view historical data and trends.
- Alert whenever a metric or KPI exceeds your specified threshold.
- Collect data from multiple fax server systems using one platform.
- Maintain and identify issues before they escalate into visible production outages.
- Report and present accurate metrics on fax traffic, history of transmissions thru a centralized customizable reporting interface.
